ITT CLOSED RATE

12.4% vs 12.1%

Treatment – control = +0.31 pp

TREATMENT REQUEST RATE

95.0%

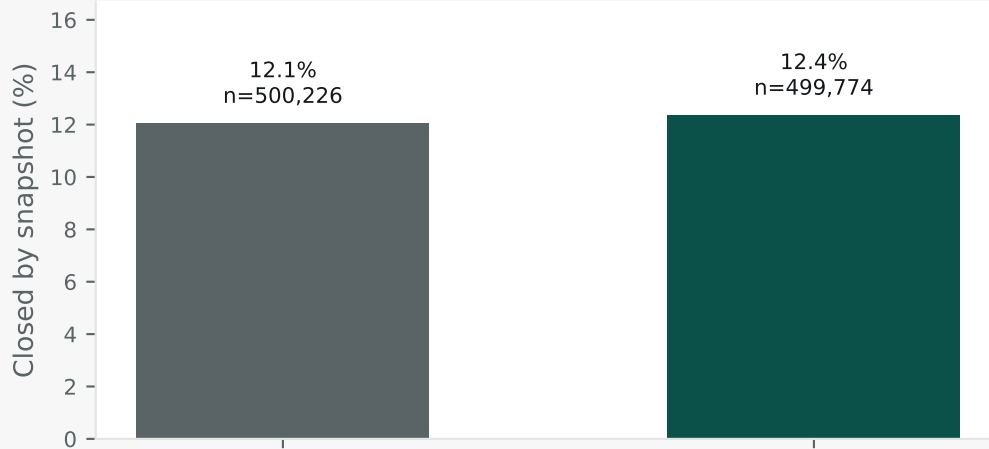

475,034 of 499,774 requested once

APPROVAL AMONG REQUESTS

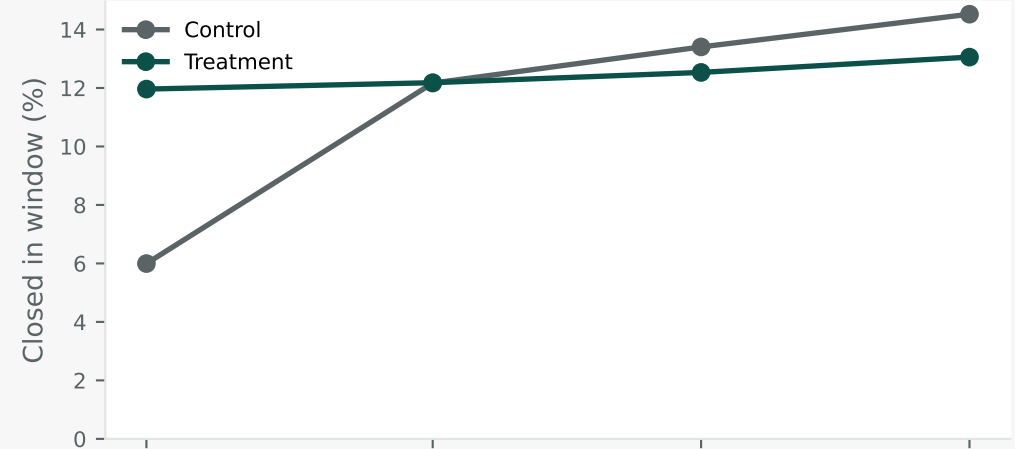

76.8%

Control requests: 0 (expect 0)

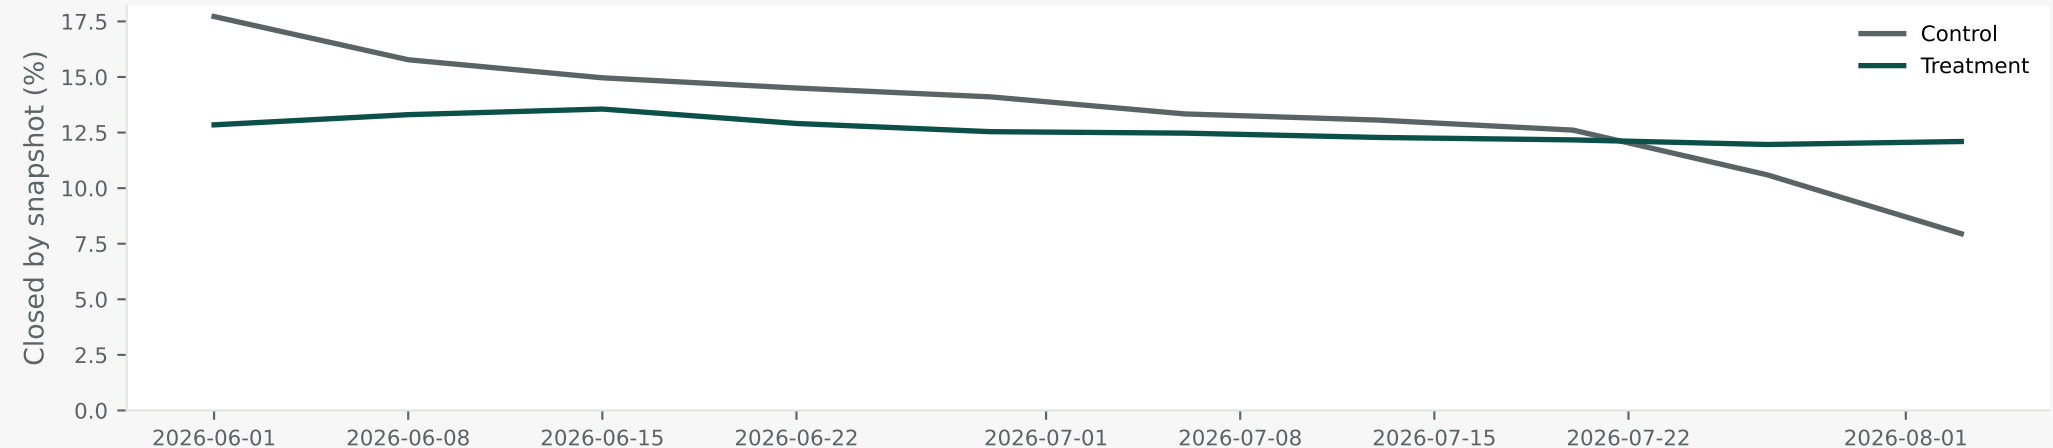

Closed accounts by assignment (ITT)

Closed within N days of join (tenure-matched)

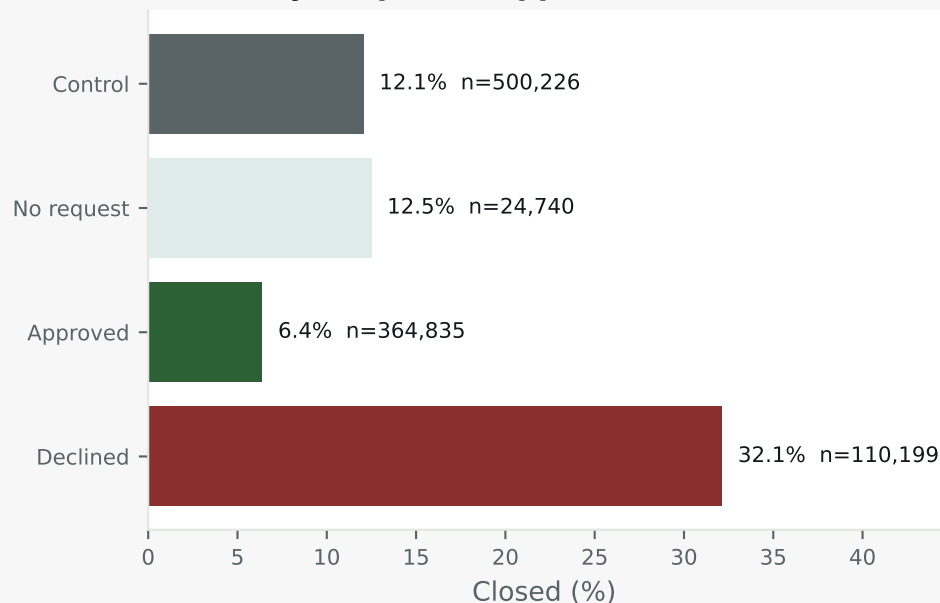

Closed rate by join week

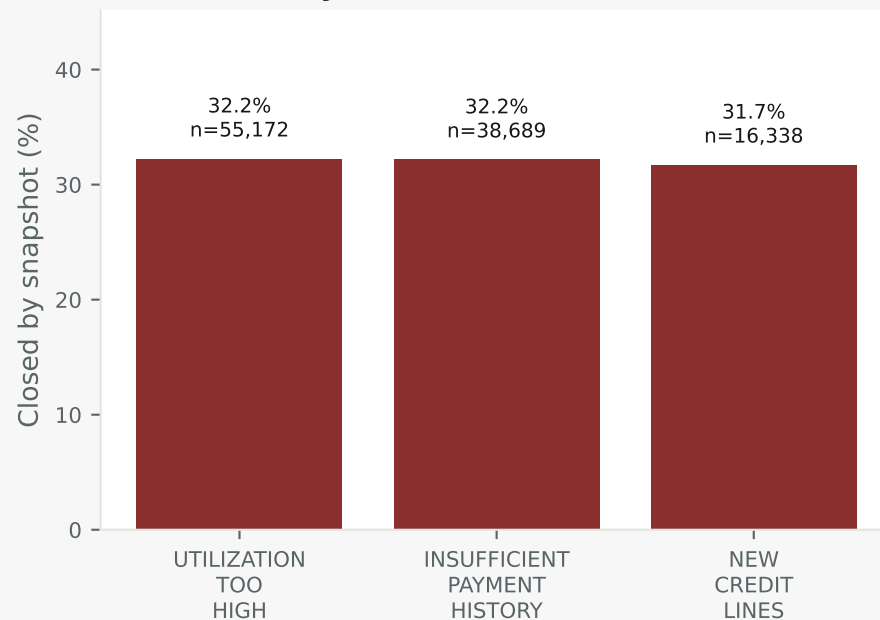

Where retention moves inside treatment

Requesting is chosen, not randomized. Use this to find the next experiment — not as the ITT result.

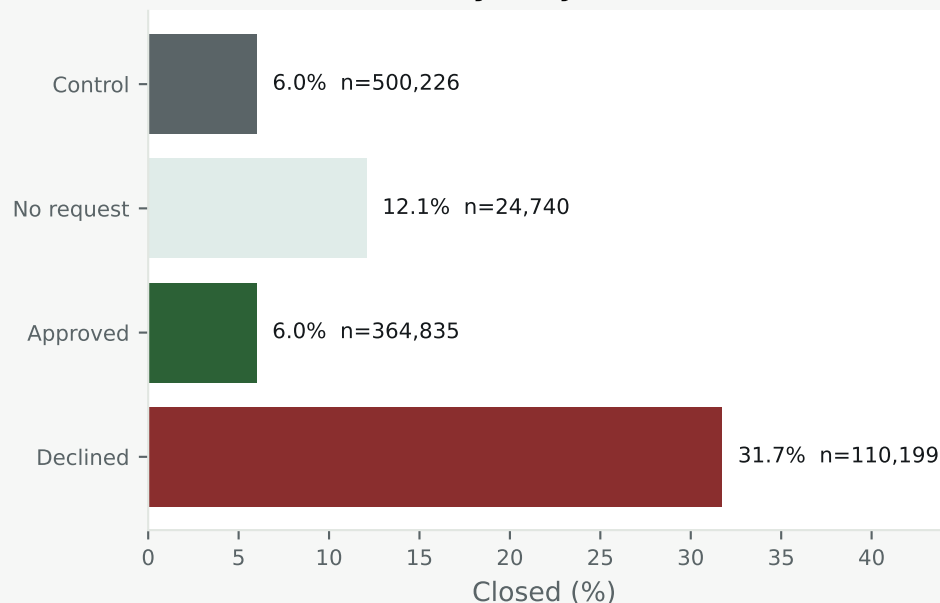

Closed by snapshot (Approved / Declined are treatment)

Closed rate by decline reason

Closed within 14 days of join

Notes for the ship / no-ship call

Join window: 2026-06-01 → 2026-08-09

Duplicate request rows: 0

Zero headroom at signup: 23.1%

Zero-headroom treatment still requested at 95.0%

Asks above max eligible: 23.2% of requests

Every decline is an overshoot; every approval is in-range.

Closed if overshoot: 32.1% · if in-range: 6.4%

Decline reasons all churn ~32%. The event is the decline, not which reason code was attached.

The app slider is USD 100-2,500 and does not cap to remaining room. The API will accept a doomed ask and return DECLINED.
